

خروجی کامل پروژه و راه‌اندازی روی GitHub

محتویات release

این release شامل Docker Compose، frontend، backend و integration‌های زیر است:

```
backend/
├── config/           Django, URLs, ASGI, production config
├── accounts/         auth, users, roles, quota
├── files/            upload/download, sharing, versioning
├── ai/               OpenAI-compatible, quota, usage log
├── support/          support & messages
├── desk/             desk, session, installers
├── monitoring.py     HTTP metrics middleware
├── monitoring_views.py /api/metrics/ endpoint
├── Dockerfile
└── entrypoint.sh

src/
├── api/              API client & auth
├── auth/             AuthProvider & session
├── components/       editors, dashboard, UI
├── pages/            frontend routes/pages
└── styles.css

monitoring/
├── prometheus/       scrape config & alert rules
├── grafana/          datasource & dashboard provisioning
├── loki/             centralized logs
├── promtail/         Docker log collector
└── alertmanager/     Telegram & Slack templates

ops/backup/
├── backup.sh         PostgreSQL + MinIO backup
├── restore.sh        protected restore
├── restore-drill.sh  isolated staging restore drill
├── *.service         systemd services
└── *.timer           systemd schedules

.github/workflows/ci.yml
docker-compose.yml
docs/
```

راه‌اندازی با Docker

```
git clone https://github.com/YOUR_USERNAME/cloud-office.git
cd cloud-office
cp .env.example .env
```

در env. حداقل این مقادیر را تغییر دهید:

```
DJANGO_SECRET_KEY=این‌ال‌و‌ط-یف‌دا‌ص‌ت-دیل‌ک‌ی
DJANGO_SUPERUSER_PASSWORD=ی‌وق-ز‌م‌ر-ک‌ی
MINIO_ROOT_PASSWORD=ی‌وق-ز‌م‌ر-ک‌ی
ONLYOFFICE_CALLBACK_SECRET=این‌ال‌و‌ط-یف‌دا‌ص‌ت-دیل‌ک‌ی
GRAFANA_ADMIN_PASSWORD=ی‌وق-ز‌م‌ر-ک‌ی
```

اجرای اصلی / Monitoring / OnlyOffice / کامل:

```
docker compose up -d --build
docker compose --profile office up -d
docker compose --profile monitoring up -d
docker compose --profile office --profile monitoring up -d --build
```

آدرس‌های local:

```
Frontend:    http://localhost:3000
Backend:     http://localhost:8000
Health:      http://localhost:8000/api/health/
Metrics:     http://localhost:8000/api/metrics/
OnlyOffice:  http://localhost:8080
Grafana:     http://localhost:3001
```

Prometheus: http://localhost:9090
Alertmanager: http://localhost:9093
MinIO: http://localhost:9001

اجرای تست‌ها

```
cd backend
python -m venv .venv && . .venv/bin/activate
pip install -r requirements.txt
AI_API_KEY= OPENAI_API_KEY= python manage.py check
AI_API_KEY= OPENAI_API_KEY= python manage.py test
cd ..
pnpm install --frozen-lockfile
pnpm typecheck && pnpm build
python3 -c "import yaml; yaml.safe_load(open('docker-compose.yml')); print('Compose OK')"
```

قراردادن در GitHub (از ZIP یا Bundle)

از repository ZIP: خالی بسازید extract کنید remote اضافه کنید push

```
git remote add origin https://github.com/YOUR_USERNAME/cloud-office.git
git branch -M main
git push -u origin main
```

از Git Bundle:

```
mkdir cloud-office && cd cloud-office
git clone /path/to/cloud-office-git-ready-v0_3_6.bundle .
git remote add origin https://github.com/YOUR_USERNAME/cloud-office.git
git push -u origin main
```

CI در GitHub

فایل `github/workflows/ci.yml` این کارها را انجام می‌دهد:

- frontend install + typecheck + production build
- backend install + Django check + tests
- Compose configuration validation

در Settings Branches برای main گزینه Require status checks before merging را فعال کنید.

Secret های GitHub

مقادیر واقعی را در repository نگذارید. از Environments (staging / production) استفاده کنید:

```
DJANGO_SECRET_KEY
DJANGO_SUPERUSER_PASSWORD
MINIO_ROOT_PASSWORD
ONLYOFFICE_CALLBACK_SECRET
AI_API_KEY
GRAFANA_ADMIN_PASSWORD
TELEGRAM_BOT_TOKEN / TELEGRAM_CHAT_ID
SLACK_WEBHOOK_URL
BACKUP_S3_ACCESS_KEY / BACKUP_S3_SECRET_KEY
```

Backup و Restore Drill روی staging

```
./ops/backup/backup.sh
./ops/backup/restore-drill.sh
```

زمان‌بندی backup روزانه و drill هفتگی با systemd (فایل‌های service/timer در `/ops/backup`):

```
sudo cp ops/backup/cloud-office-backup.{service,timer} /etc/systemd/system/
sudo cp ops/backup/cloud-office-restore-drill.{service,timer} /etc/systemd/system/
sudo systemctl daemon-reload
sudo systemctl enable --now cloud-office-backup.timer
sudo systemctl enable --now cloud-office-restore-drill.timer
```

production checklist

- HTTPS برای frontend, backend و OnlyOffice
 - secret manager
- PostgreSQL backup + PITR برای RPO پایین
 - MinIO versioning و off-site backup
- Grafana یا reverse proxy یا VPN پشت Grafana
 - Alertmanager به Telegram/Slack
- سبزی CI و branch protection
 - staging موفق در Restore Drill
 - database migration plan
 - rollback image با commit SHA
- backup و restore (نه فقط syntax check)
